FREEDOM TO CONNECT

NORTHWEST MONTANA / NEXT-GENERATION INTERNET

Big country. A stronger connection.

MontanaSky's SkyConnect Pro brings high-speed internet to homes right in town and out in the county across Northwest Montana.

Powered by Tarana next-generation fixed wireless access (ngFWA), SkyConnect Pro delivers fast broadband over the air. A tower connects to a compact outdoor receiver at your home, bringing service inside without trenching a fiber line across your property.

Stream your favorites. Join a video call. Work from home. SkyConnect Pro is built for the way Montana lives, with local technicians and support from people who know the terrain. Availability and speeds depend on your address and the installed link.

A BIG DEAL FOR NORTHWEST MONTANA

Right in town. Out in the county.

Gig-class wireless.
A new choice for your home.

Already connected to cable or fiber? You can still choose SkyConnect Pro. Our next-generation wireless service is available in town as well as in the county, wherever your address qualifies.

ON SPECTRUM CABLE?

Compare your current Spectrum cable bill with SkyConnect Pro. You may be able to move to gig-class download speeds at a lower monthly rate, with a Montana-based team behind your connection.

ON LOWER-SPEED FIBER?

A fiber connection does not always mean you are on a fast plan. If you subscribe to a lower-speed fiber tier, SkyConnect Pro may offer more download speed for less than you pay today.

SKYCONNECTPRO ULTIMATE

500-900 Mbps down

100-200 Mbps up

\$100.00/mo

Compare your current rate and speeds. Savings depend on your existing plan. Availability and achievable speeds depend on your address and installed link.

HOW TARANA WIRELESS WORKS

Built for the terrain.

Trees, buildings, and busy airwaves challenge conventional fixed wireless. Tarana uses advanced signal processing to handle those challenges and make more locations reachable.

01 Making use of multiple paths

A radio signal can reach a home by more than one route, including reflections and diffraction around obstacles. Tarana combines these paths into a usable connection, helping serve properties where a clear view of the tower is unavailable. Non-line-of-sight capability still depends on the site.

02 A connection that keeps adapting

Distributed massive MIMO uses multiple radios and antennas to shape the link between tower and home. Tarana's technology primer describes adaptive channel calculations performed 5,000 times per second to respond to motion and changing radio conditions.

03 Filtering out wireless interference

Tarana's asynchronous burst interference cancellation (ABIC) reduces interference from outside the network. It helps preserve signal quality when other wireless transmitters share the surrounding airwaves.

SMART TECHNOLOGY. REAL-WORLD PLANNING.

A site survey confirms what works at your property. Obstructions, terrain, weather, and installation quality can still affect performance.

WHAT A CUSTOMER CAN EXPECT

Speed for your everyday life.

Bandwidth for streaming, gaming, video calls, and work - with low latency and local support. Choose the service that fits your home and the plans available at your address.

SkyConnectPro Ultimate

One pricing structure for all SkyConnect Pro locations. Availability and achievable speeds depend on your address and installed link. Ultimate offers 500-900 Mbps download and 100-200 Mbps upload; confirm the speeds available at your property when ordering.

NO DATA CAPS / NO HIDDEN FEES / LOCKED-IN PRICING

FROM YOUR FIRST CLICK TO YOUR FIRST STREAM

Connect with confidence.

A planned installation, a tested connection, and a local team to help you get started.

- 1 Order your service**
Check availability, choose your plan, and complete your agreement online or with MontanaSky's sales team.
- 2 Find the best signal**
A technician surveys your property to choose a suitable outdoor receiver location and a cable route to your home's network center.
- 3 Confirm and install**
Confirm the installation details and schedule. The outdoor receiver connects by Ethernet cable to indoor power equipment and your router.
- 4 Test and get connected**
Your technician sets up Wi-Fi and checks wired speeds to the router. Additional Wi-Fi coverage or individual device setup can be arranged when needed.

STANDARD INSTALLATION

The listed plans show a \$200 installation fee with a 12-month contract. Fee-waiver options may be available; confirm the applicable agreement and any nonstandard work before scheduling.
